Seminar Tips

Mobile and distributed computing systems

Johan Kristiansson

Seminar task

- Cooperate in teams of 3 people for the seminar. In Canvas, there are empty groups of three set up so that you can go there and join. If you have valid reasons; we can approve other group sizes (2-4 people)
- The task is to make a written short review of the paper, and to make a seminar presentation of it

1. Select a paper that has relevance to the course. **Send it by email to Johan AND Carl. Subject: D7024E Seminar paper**
2. We will approve it or let you know that you should look for another paper.
3. Upload the review A4 page to Canvas under the assignment.

We expect to receive your email by noon on **Tuesday, October 7**, at the latest. However, please submit it earlier to help us spread the workload and receive early feedback. I will send out the final list of papers and presentation schedule by **Friday, 10 October**.

IMRAD (Computer Science presentation style)

The presentation should cover the following sections:

- **Introduction –** Why was the study undertaken? What was the research question, study of existing system or evaluation of a newly constructed one?
- **Methods –** When, where, and how was the study done? Analytically or experimentally? Testbed? Assumptions/constraints?
- **Results –** What answer was found to the research question; what did the study find?
- **Discussion –** Validity, applicability, open issues. What might the answer imply and why does it matter? How does it fit in with what other researchers have found? What are the perspectives for future research?

However, oral presentations are different

- Keep the interest up. Don’t save all results to the very end unless you have an exciting story leading up to them. Instead, advertise key insights early, discuss some key results early, etc.
- Personal style, whatever advice you get, be critical and consider if YOU can do it better by doing it differently
  - This also holds for the example you will get on the next slide...
  - Make it sound as if this is your own talk, not a walk-through of a talk recipe made by someone else.
  - IF you are reviewing work by others, be very clear about what their conclusions and insights are, and which are your own reflections.
